

DOCTORAL STUDIES SUBJECT SYLLABUS

Subject title	Research domain (branch), code	Faculty	Department
Business intelligence technologies	Management 03 S	Economics and business administration	Economic informatics

Subject credits	Total study load in hours	Hours of contact studies	Hours of independent work
7	196	16	180

Subject goal, tasks, annotation, grading structure

Subject goal, tasks, annotation

Goal – to deliver to the audience advanced knowledge on business intelligence technologies, their nature, specifics, potential and positioning in the activities of contemporary society.

Tasks: to define the information needs of contemporary business and other managed activities; to analyze business intelligence approaches, methods, tools, value sources, placement in an organization and modes of operation.

The course is intended for doctoral students intending to gain knowledge about today's business intelligence technologies and their sources of value, to examine their nature and operating principles, and examine their use and applications. The course presents a range of common and widely known intelligence technologies: online analytical processing (OLAP), data warehousing and data mining technologies, neural networks, big data analytics, together with practical aspects of their applications.

Content (topics)

Business activity intelligence information needs, their main types and features. Business informing environment. Environment monitoring functions. Internal and external environment monitoring. Overview of intelligence technologies. Use of quantitative methods in business intelligence. Operations research and modeling in business intelligence. Technologies of data warehouses and data mining. ETL/ELT technology structure and operating principles. Online analytical processing (OLAP). The nature and features of Big Data phenomenon. The use of neural networks, artificial intelligence and machine learning in business intelligence. Web analytical technologies. Text analysis and text mining technologies. Information presentation technologies. Information visualization. Information quality problems. Context management and experience management.

Grading

An oral exam (70%) and an essay (30 %) on a chosen topic in the area of decision support and business intelligence, based on the latest and most prominent publications in the area and complemented with student's insights and conclusions regarding discussed topic. The volume of the essay is 25-30 double-spaced pages.
